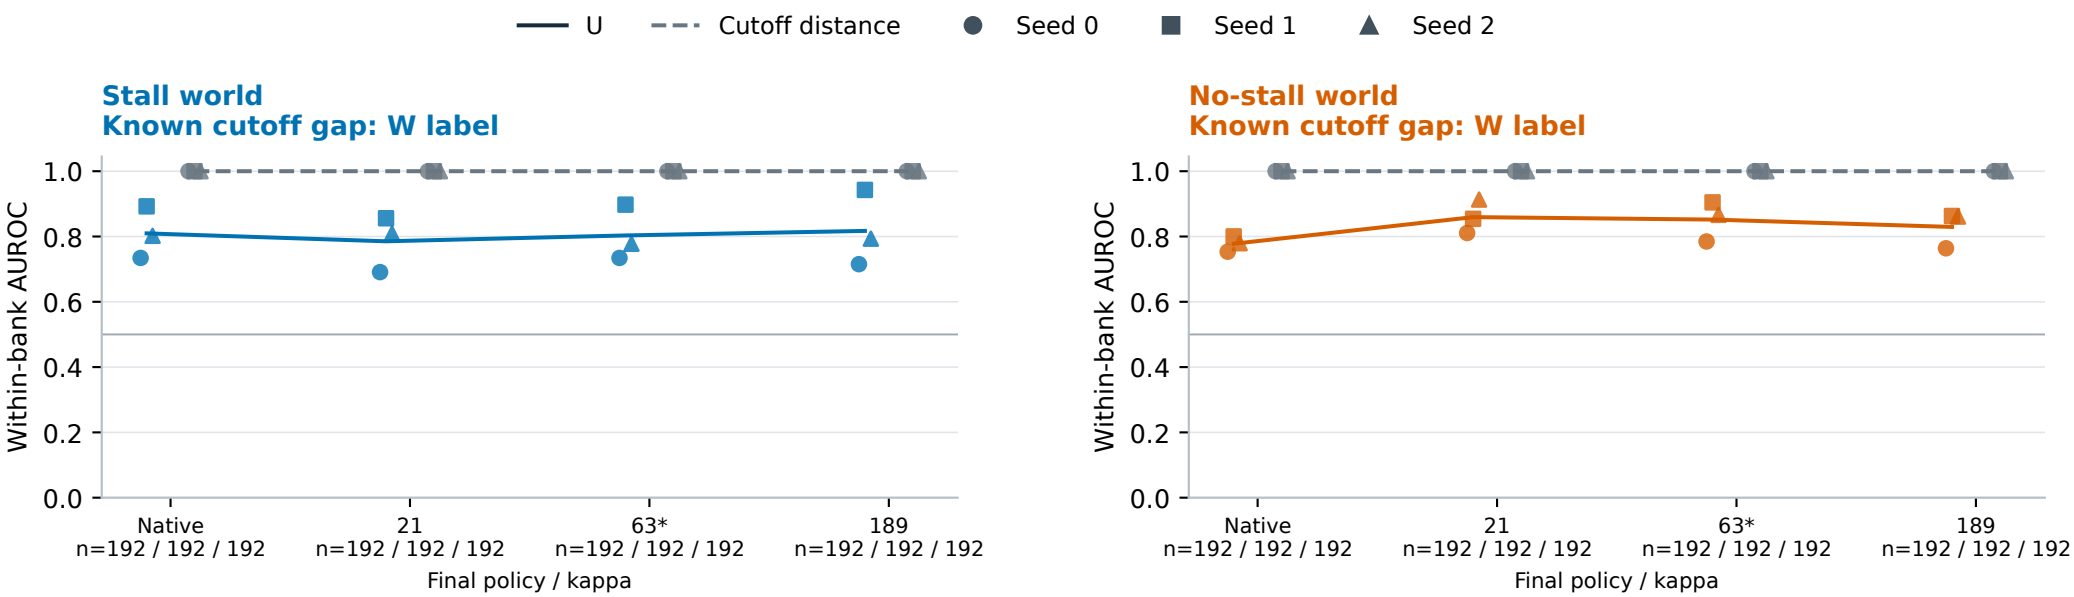
Does U identify support gaps or harmful value errors?

Fixed positive orientation: higher U or distance predicts the named event. No fitted threshold or AUROC direction flip.



n lists eligible banks for seeds 0 / 1 / 2 out of 192. NA means no mixed-label banks: AUROC is undefined and no point is plotted.
One-class banks excluded; no-stall lower-value results often use only 0-6 banks. Counts matter more than a high sparse-bank AUROC.
Support and optimism: 4 actions; lower-than-logged: 3 withheld actions. *63 was prespecified; these diagnostics are retrospective.
