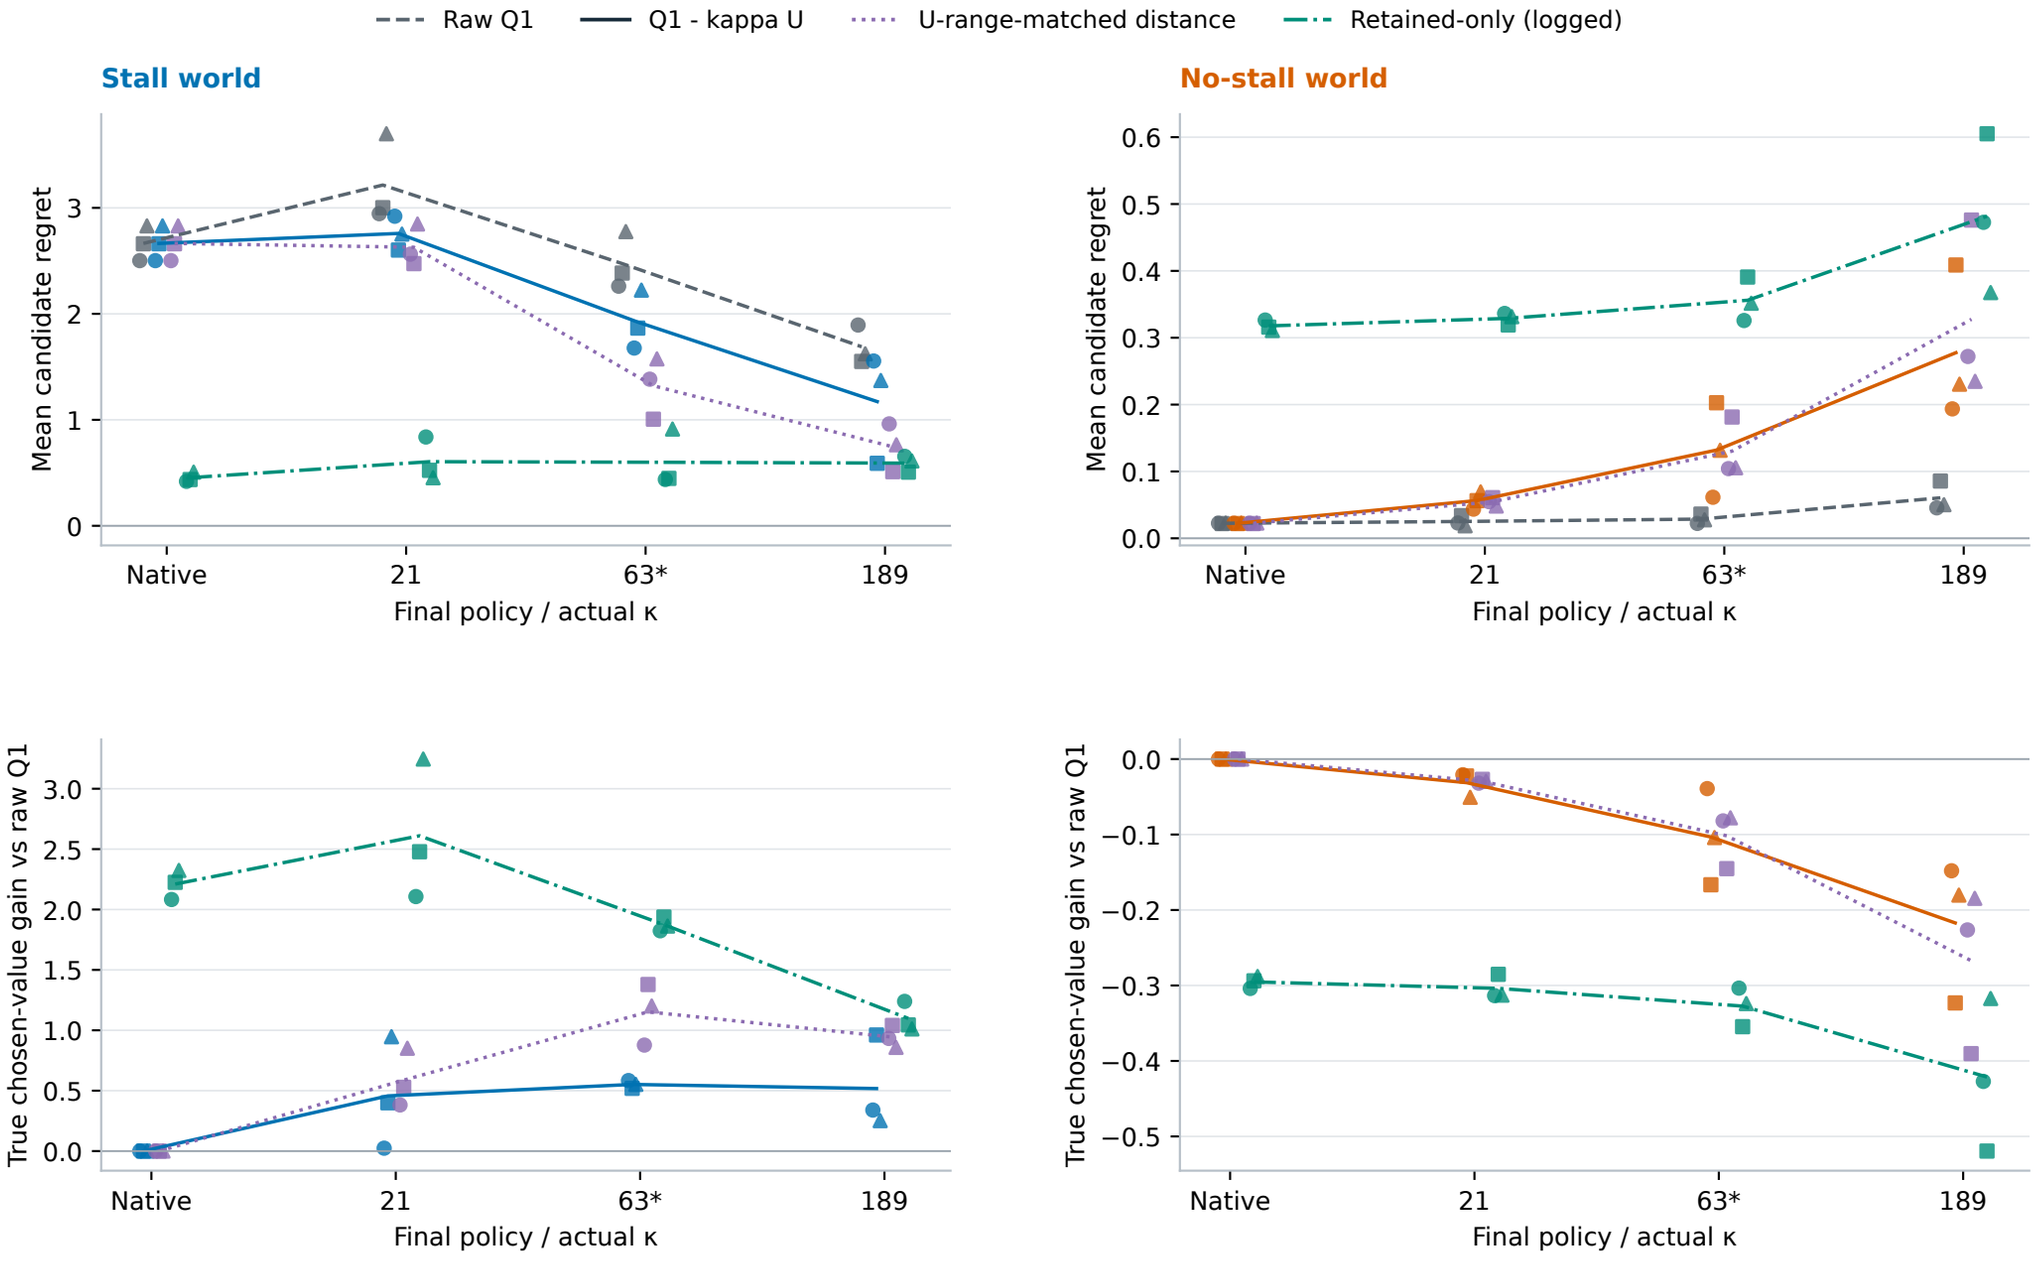
What do simple bank-level controls change?

Frozen candidate choices only: no additional policies trained and no claim of deployed-control performance.



Distance penalty matches the within-bank kappa U range using U and actions only. It adapts per bank: not a fixed independent control.
The retained-only choice is the logged action. 192 shared banks x 3 models; own-policy Qpi. Axes differ across worlds.
Shapes: seed 0 circle, 1 square, 2 triangle. Native kappa=0: raw, BCA and distance controls coincide. *63 was prespecified.
