

SYNTHETIC TEST • Learning curves

All seeds; approximate seed-bootstrap 95% bands

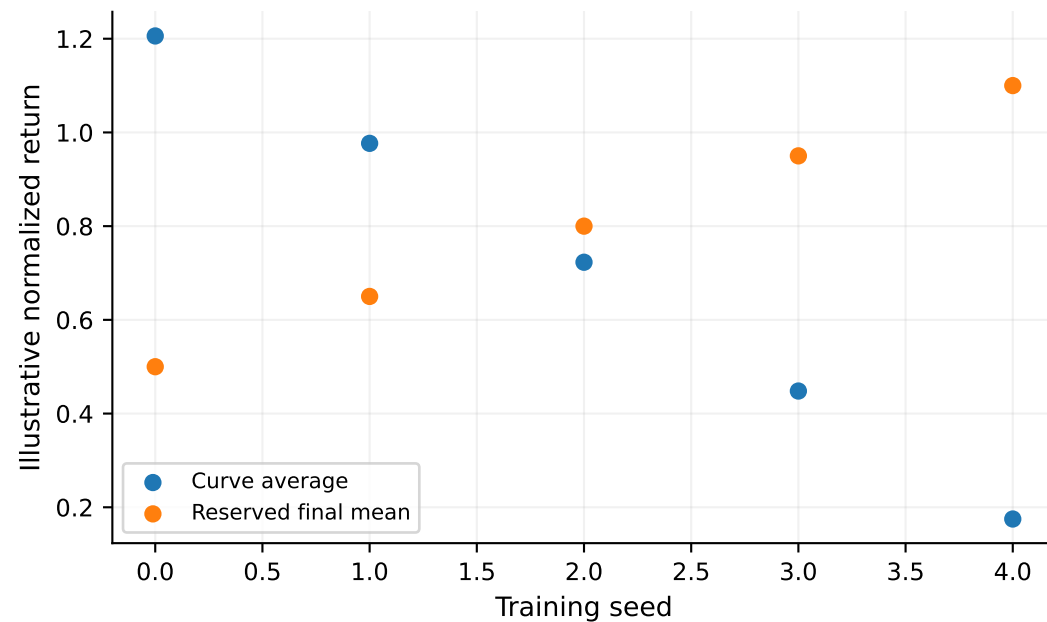

SYNTHETIC TEST • Final performance is separate

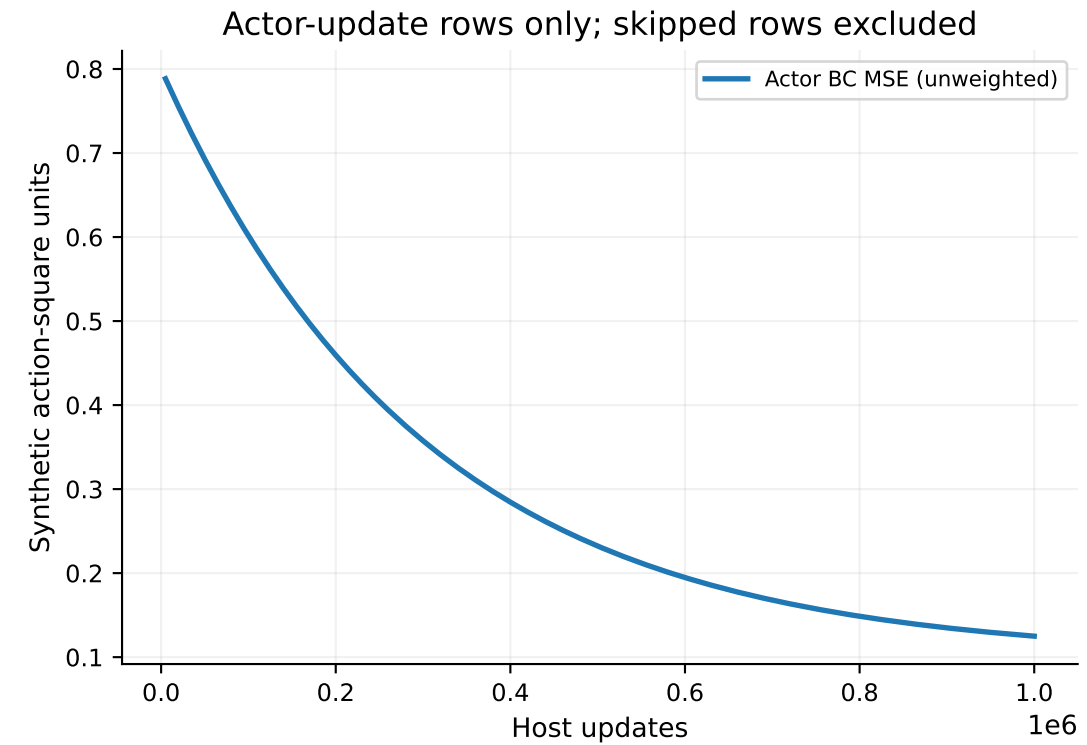

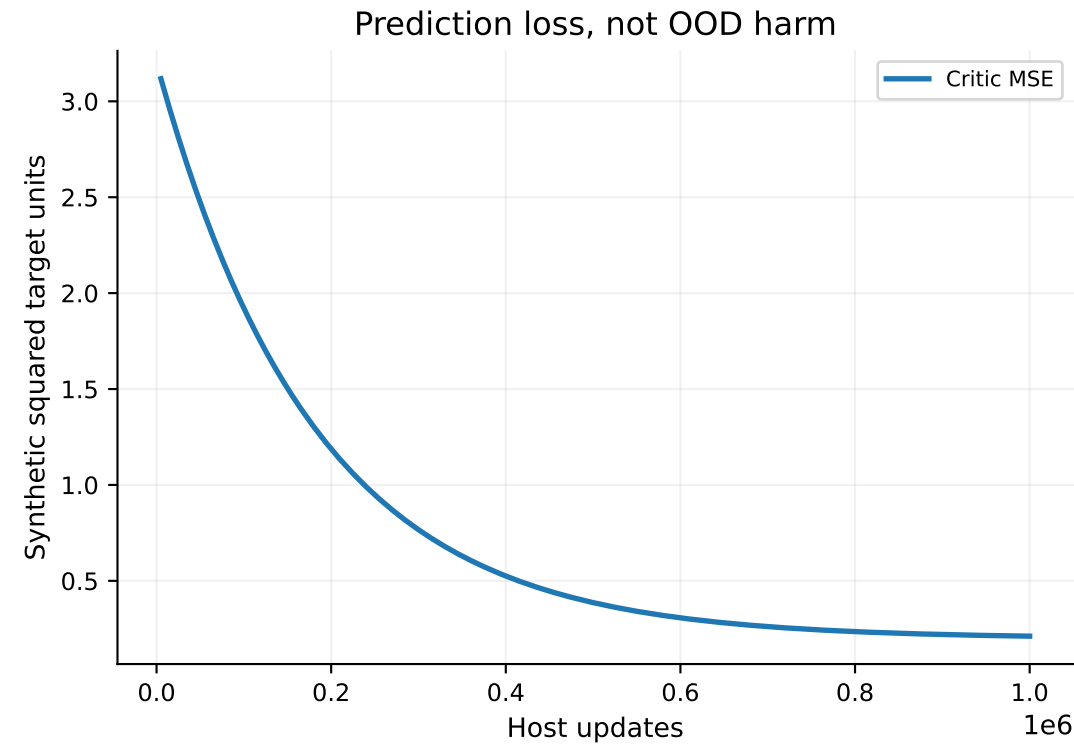

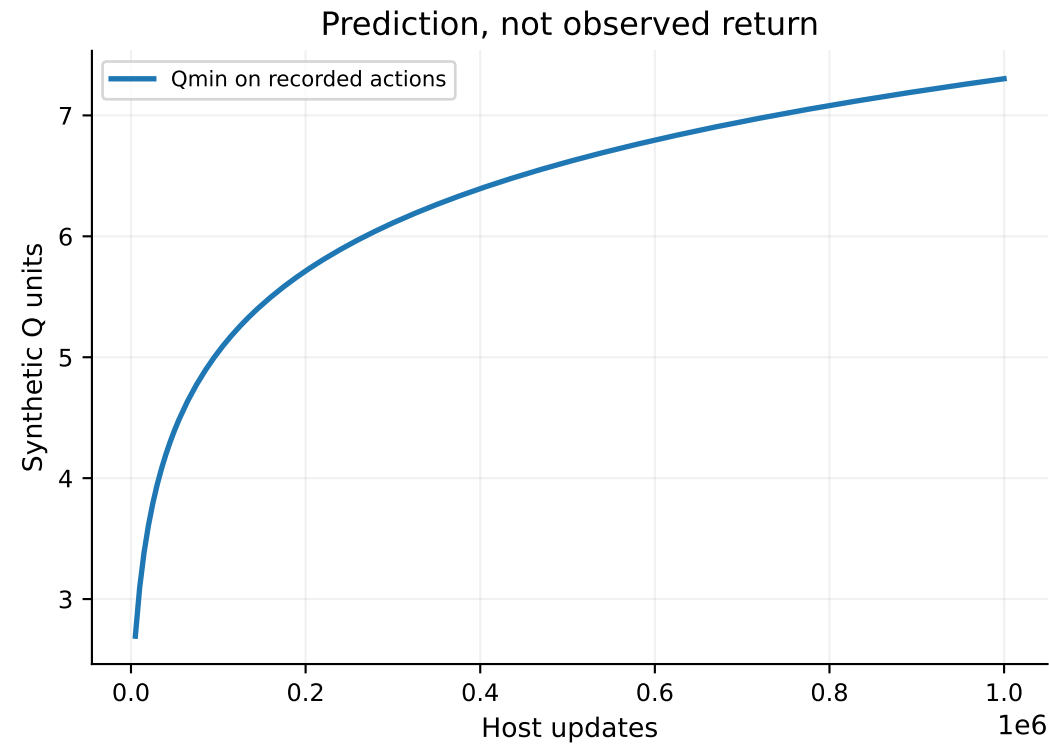

Reserved bank: episode spread, not seed confidence

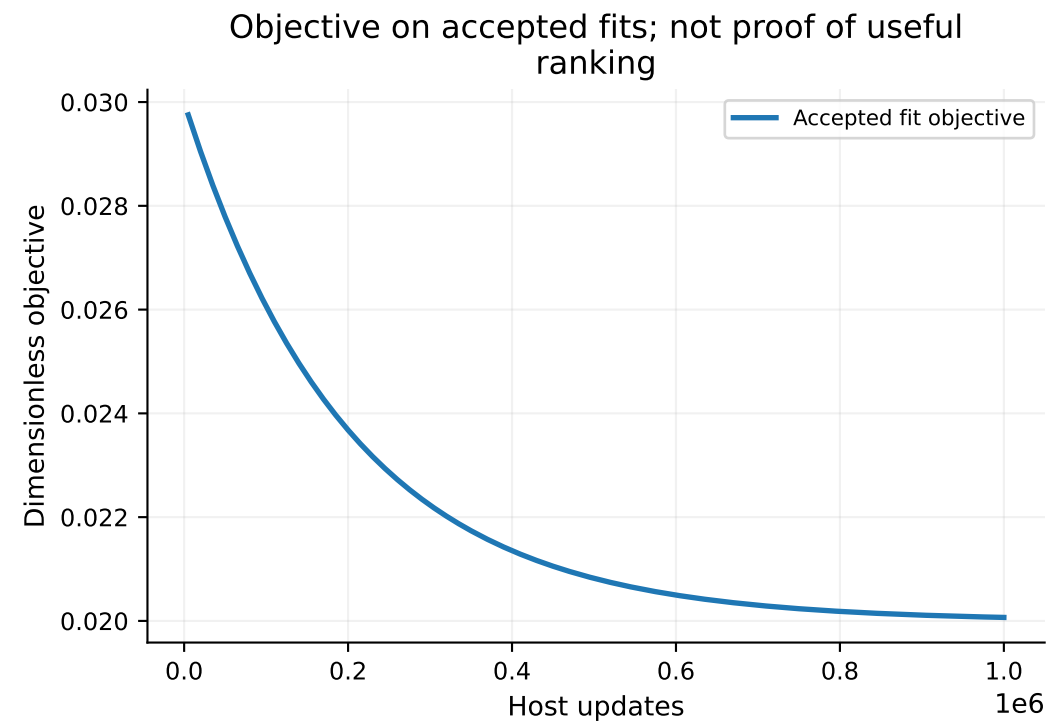

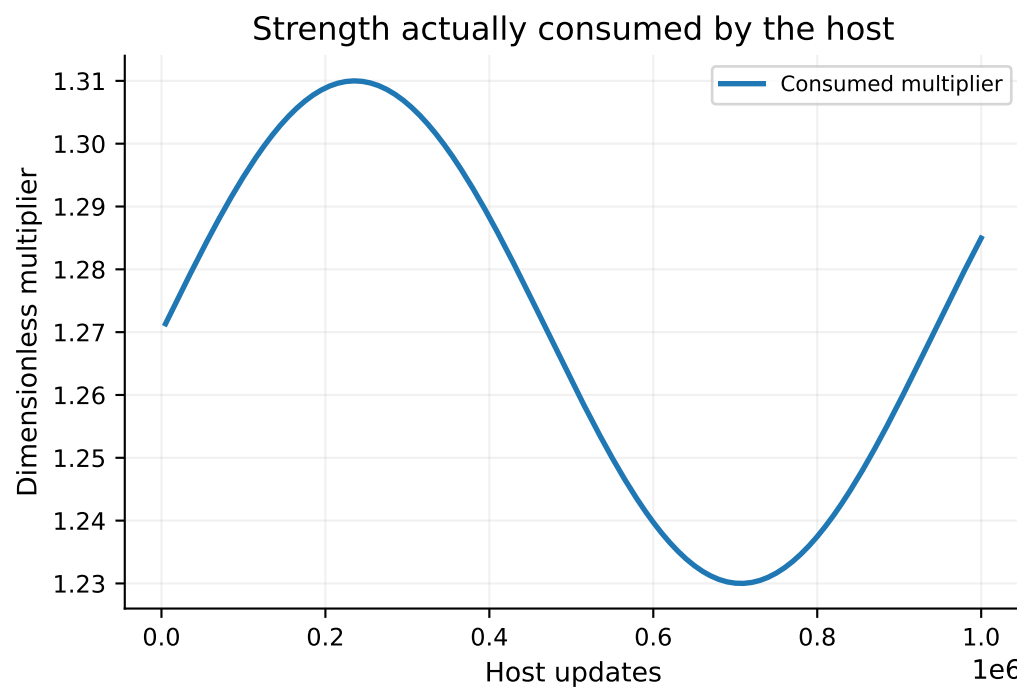

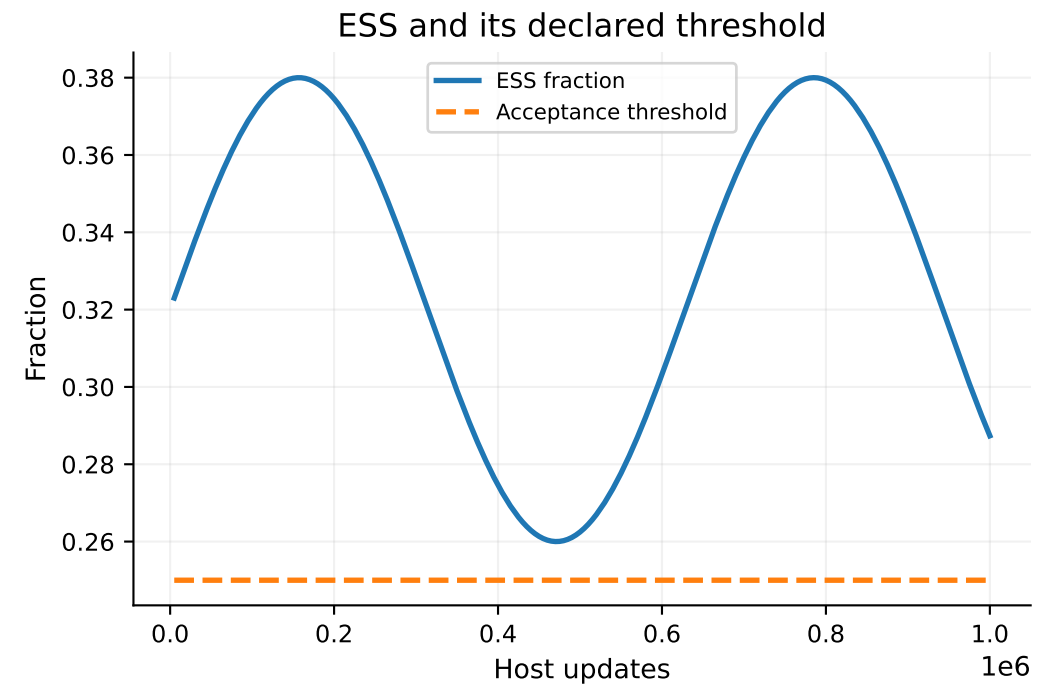

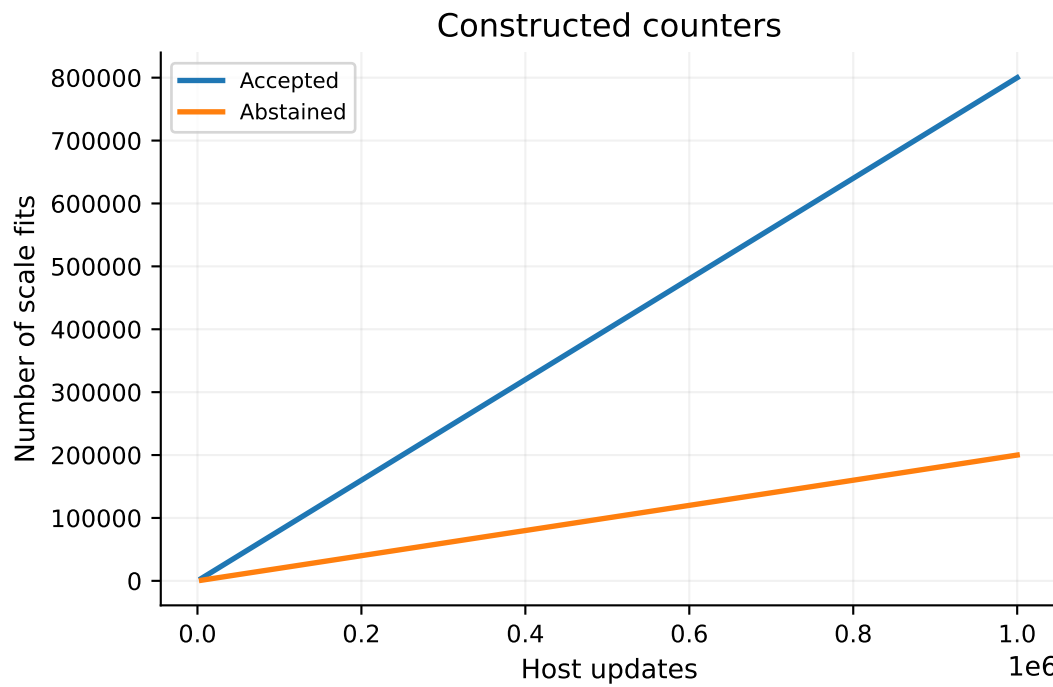

Paired difference: BCA minus host

SYNTHETIC TEST • Training quantities have different meanings

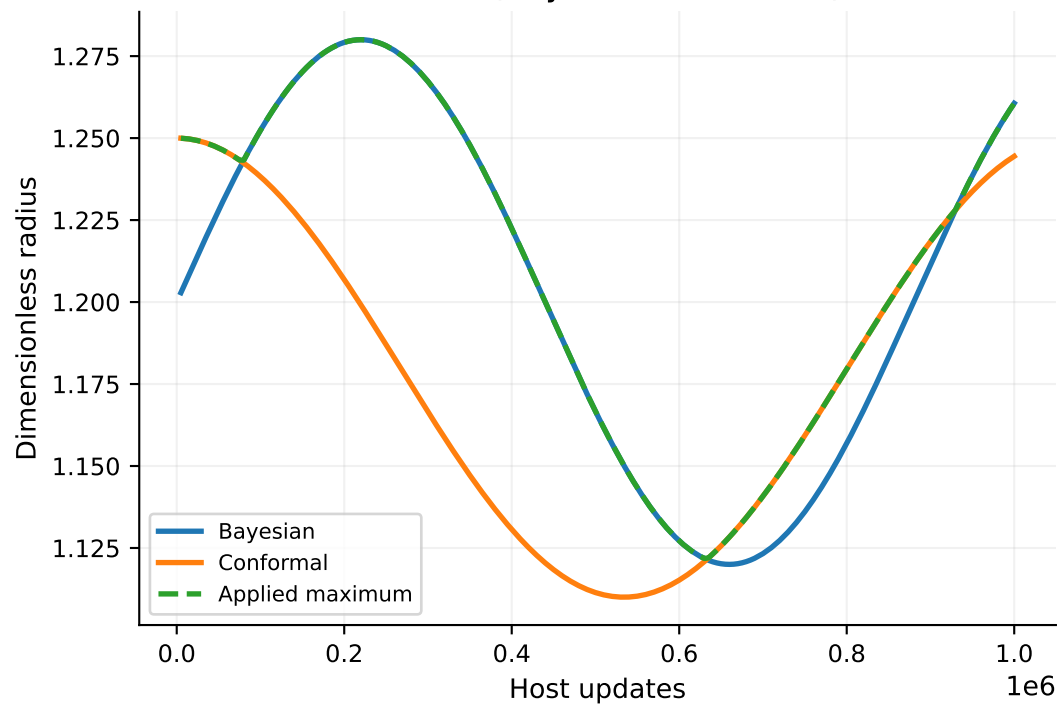

SYNTHETIC TEST • Fitting activity and applied strength

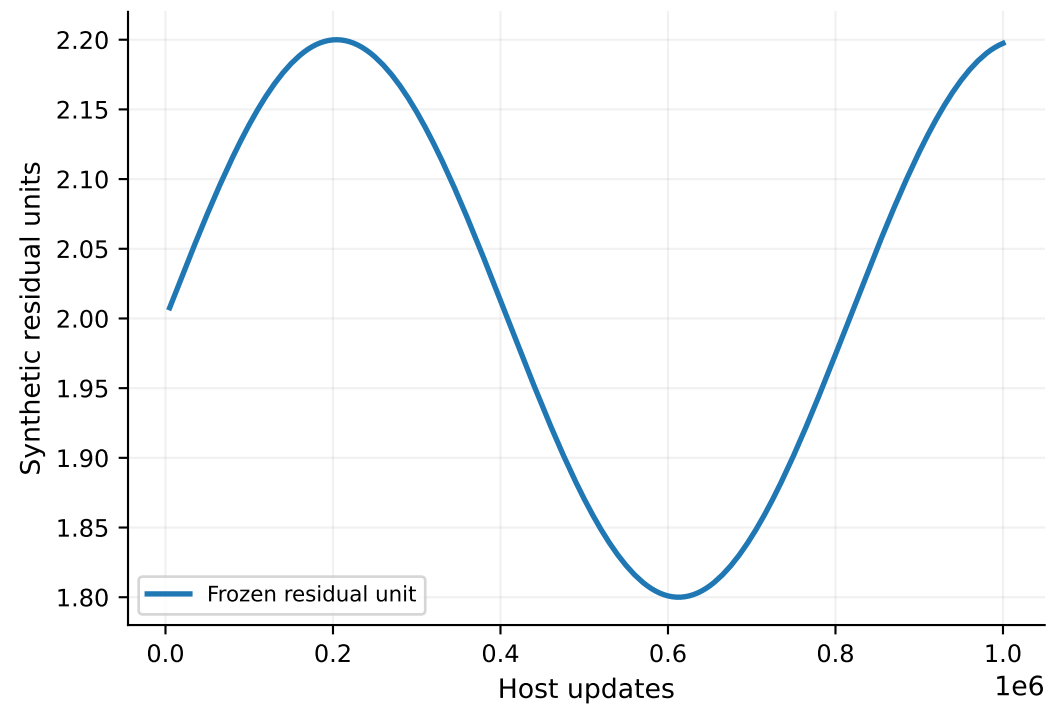

SYNTHETIC TEST • Both radius components remain visible

$R = \max(\text{Bayesian}, \text{conformal})$

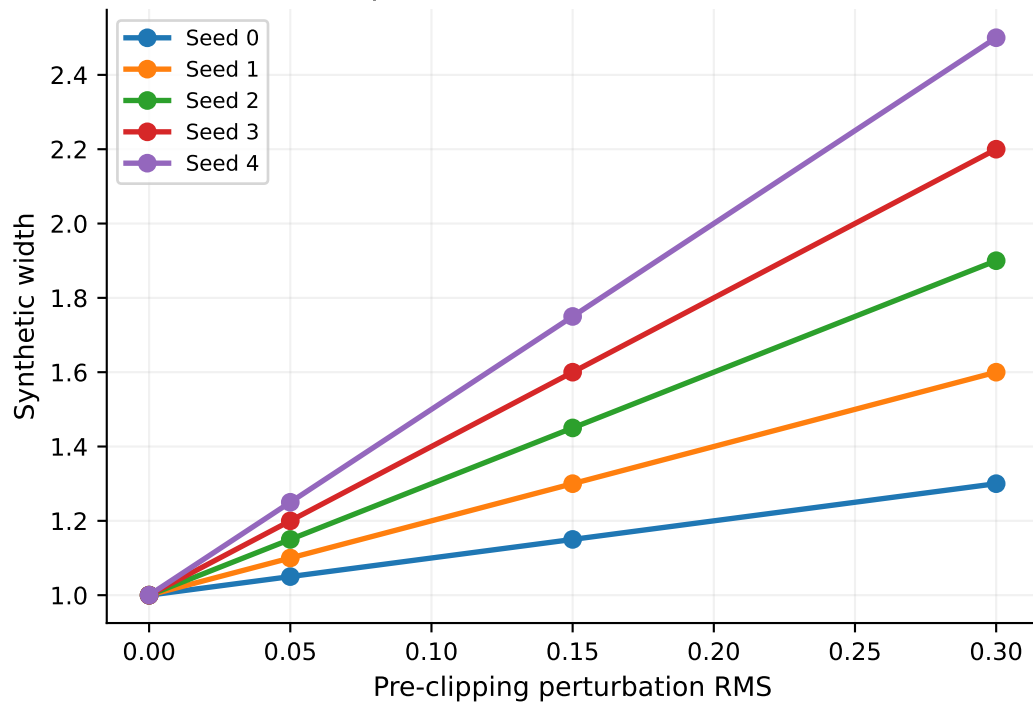

$\text{Width} = \text{radius} \times \text{frozen unit} \times \text{scale}$

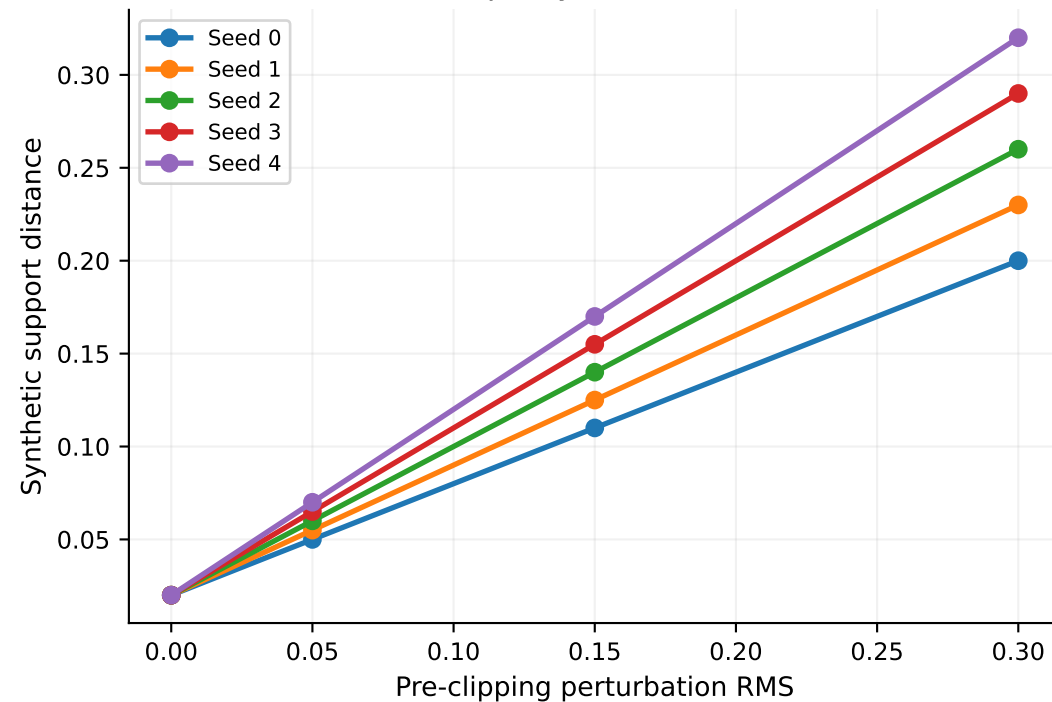

SYNTHETIC TEST • Unfamiliarity and width

Width response to a constructed action shift

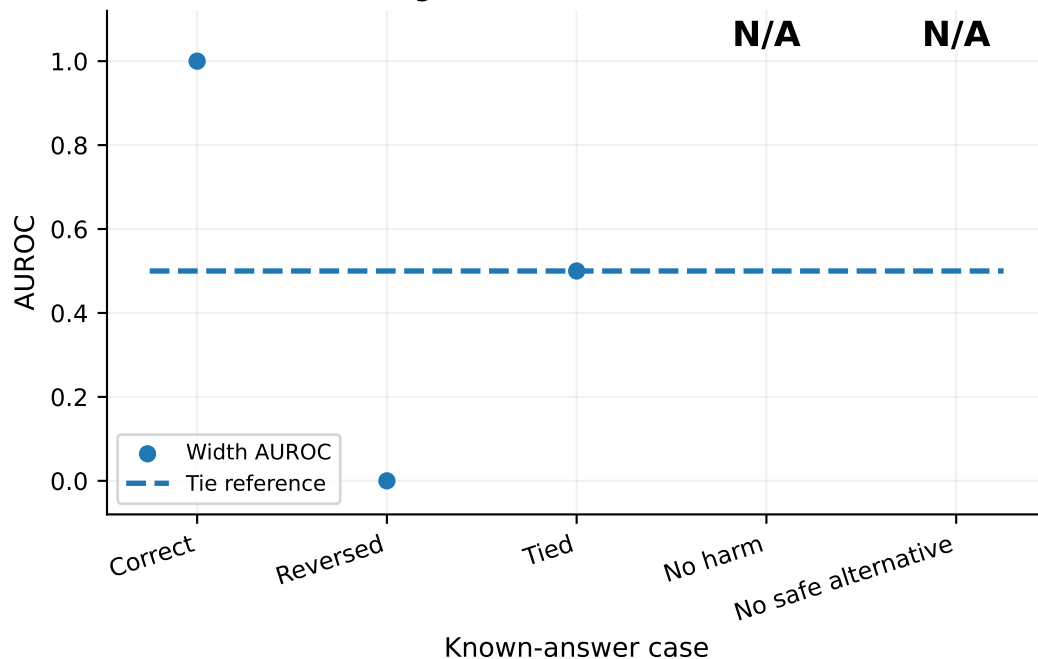

Distance is a proxy, not true OOD status

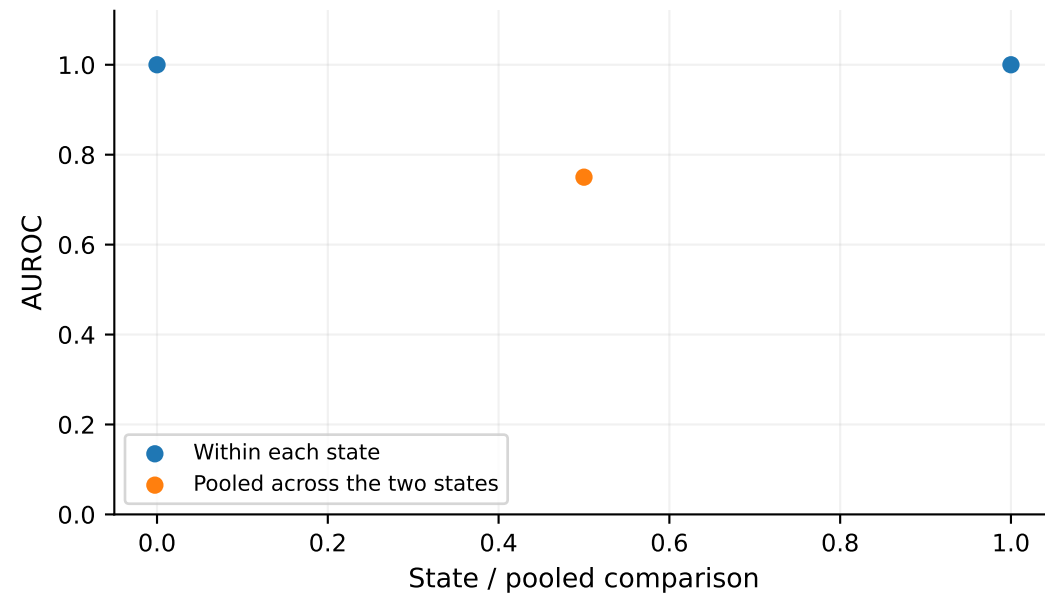

SYNTHETIC TEST • Does the score identify harmful actions?

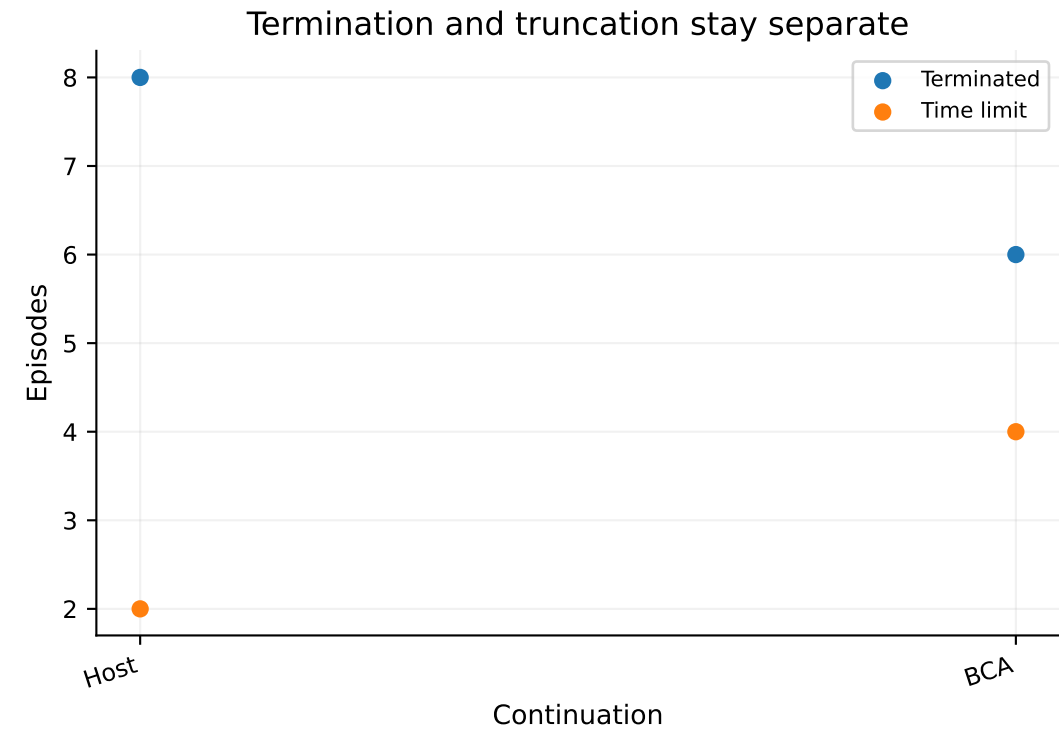

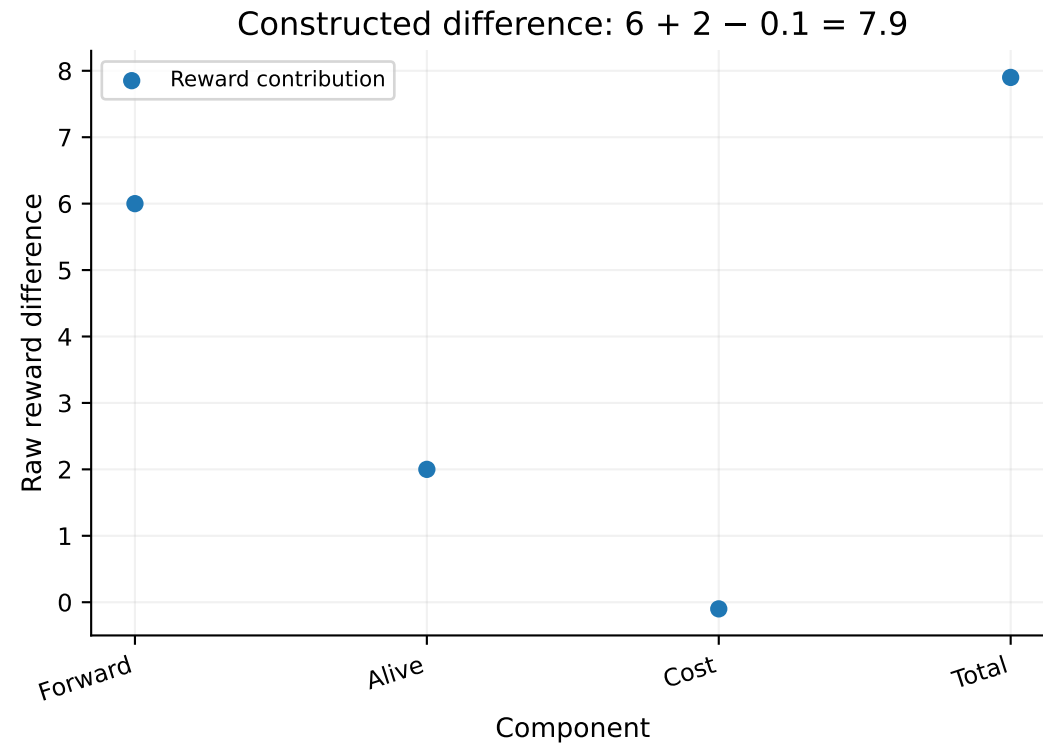

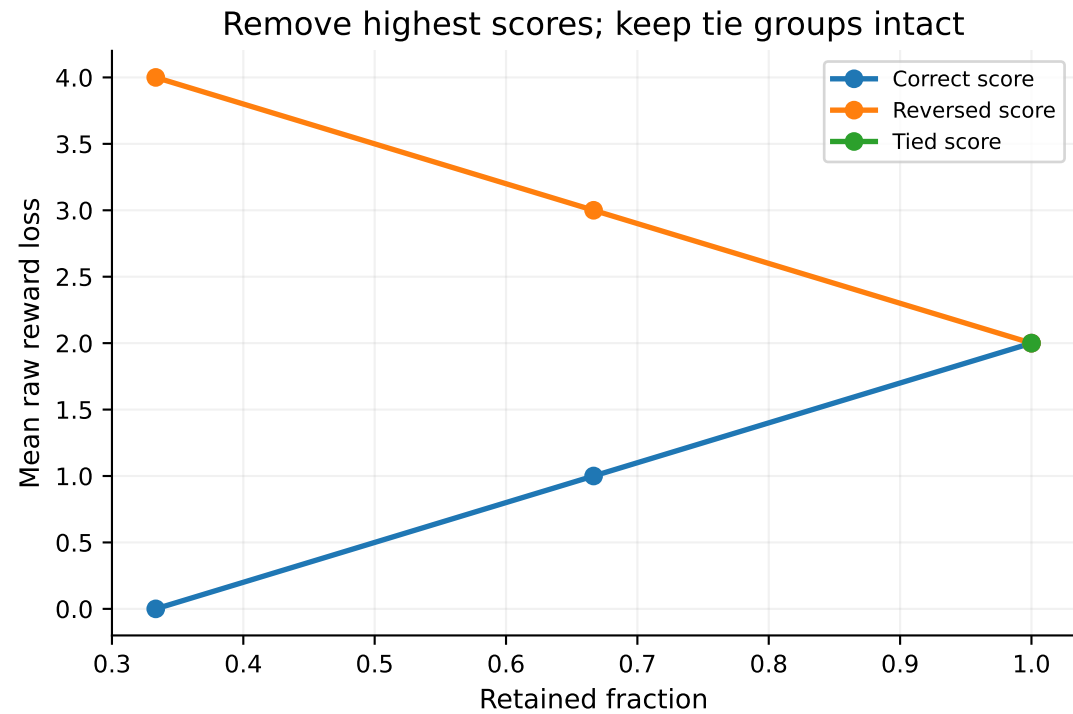

Single-class states are N/A

Same ordering within states; shifted score levels

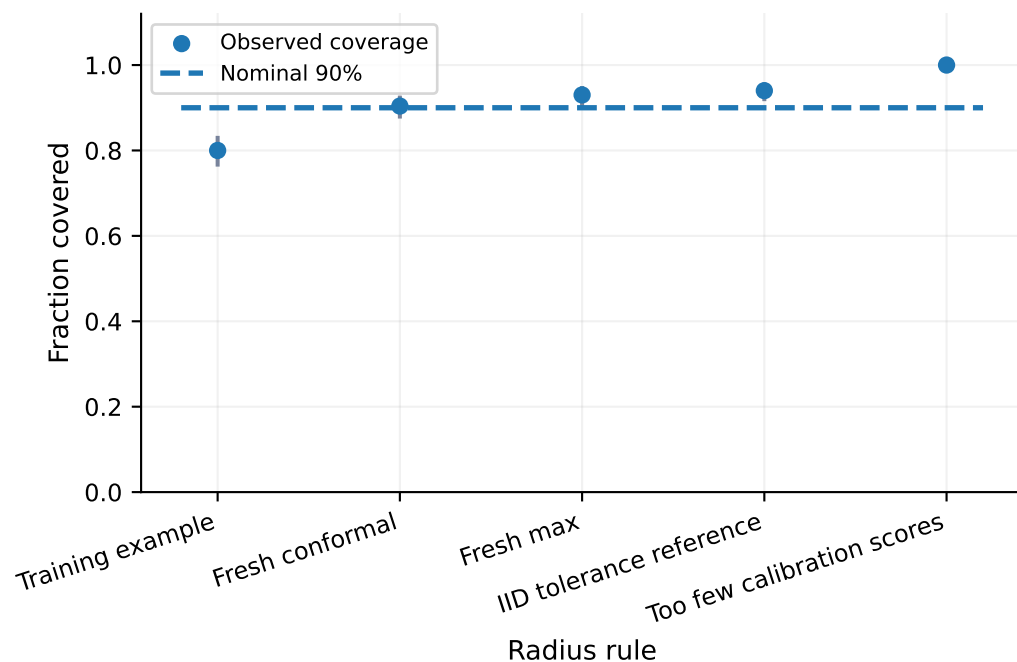

SYNTHETIC TEST • Selection, reward components and endings

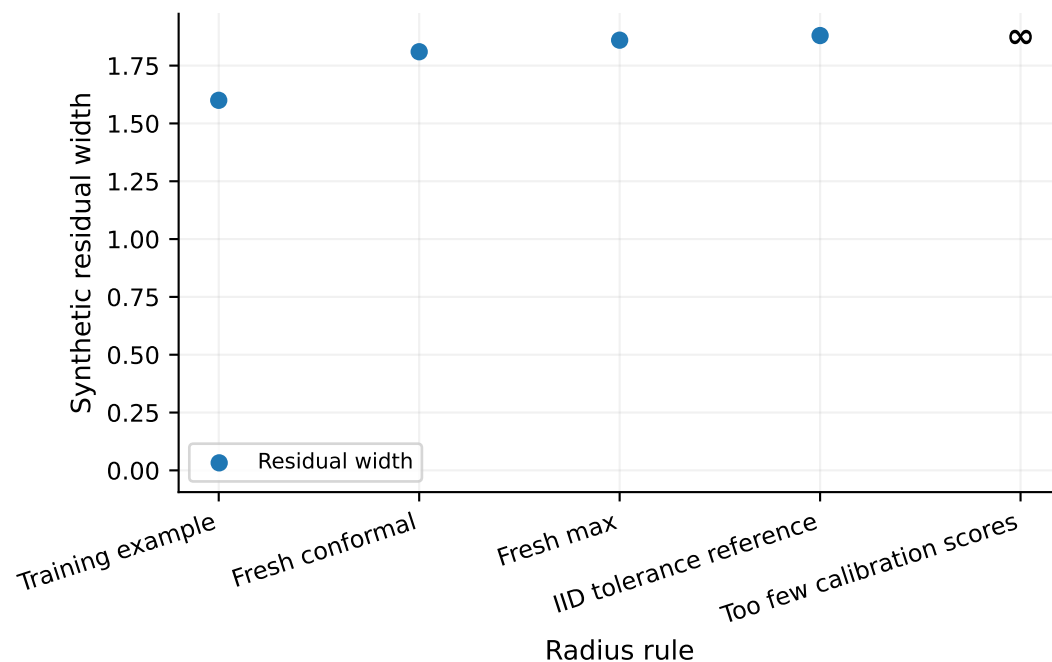

SYNTHETIC TEST • Coverage and band width must be read together

Exact binomial episode intervals; conditional on fixed band

Infinity is shown, never clipped into a finite result

SYNTHETIC TEST • A small arithmetic walkthrough
